Dirty Vaccines: Every Human Vaccine Tested Was Contaminated With Metals and Debris in New Study

Researchers examining 44 samples of 30 different vaccines found dangerous contaminants, including red blood cells in one vaccine and metal toxicants in every single sample tested – except in one animal vaccine.

Using extremely sensitive new technologies not used in vaccine manufacturing, Italian scientists reported they were “baffled” by their discoveries which included single particles and aggregates of organic debris including red cells of human or possibly animal origin and metals including lead, tin, iron, and chromium. The study also found contaminants that could impair immune response and leukemia.

In the study (<https://medcraveonline.com/IJVV/article.asp?doi=10.4236/ijvv.2017.41001>) published last week in the *International Journal of Vaccines and Vaccination*, the researchers led by Antonietta Gatti

(https://ec.europa.eu/health/ph_risk/committees/compdocs/av_gatti_en.pdf) of the National Council of Research of Italy and the Scientific Director of Nanodiagnosics (www.nanodiagnosics.it) reported results “show the presence of micro- and nano-sized particulate matter composed of inorganic elements in vaccine samples” not declared in the products’ ingredients lists.

Lead particles were found in the cervical cancer vaccines, Gardasil (*anti-therapeutic action/vaccination-mpv-gardasil*) and Cevaxir, for example, and in the seasonal flu vaccine Aggripal manufactured by Novartis as well as in the Meningetec vaccine meant to protect against meningitis G.

Samples of an infant vaccine called Infanrix Hexa (against diphtheria, tetanus, pertussis, hepatitis B, poliovirus and haemophilus influenzae type B) manufactured by GlaxoSmithKline was found to contain stainless steel, tungsten and a gold-like aggregate.

Other metal contaminants included platinum, silver, bismuth, iron, and chromium. Chromium (alone or in alloy with iron and nickel) was identified in 25 of the human vaccines from Italy and France that were tested.

Because the body may have difficulty removing these contaminants, this kind of inflammation may be sustained and chronic and can manifest as autoimmune diseases when the immune system turns on its own cells as in multiple sclerosis or type 1 diabetes.

It's also been shown that the contaminants found in the vaccines can enter cell nuclei and interact with DNA (<https://www.ceser.in/ceserp/index.php/iji/article/view/2777>), the researchers note. No one knows what that can do.

Dark history

Vaccines have a long and sordid history of contamination. In 1955 batches of polio vaccine containing live polio virus infected and paralysed hundreds of children. The tragedy became known as the Cutter Incident for the laboratory where the vaccines had passed safety tests with flying colors.

But there are dozens of other "incidents" which would better be called acts of criminal negligence, including:

- The polio vaccine doled out between 1955 and 1963 was contaminated with **simian virus 40 (/toxic-ingredient/simian-virus-40-sv40)** (SV40) from monkey kidney cells used to produce the vaccine. It's been linked to the growing epidemic of cancer ([/blog/hidden-connection-behind-viruses-vaccines-and-cancer](#)).
- In 2007, Merck & Company, Inc. recalled 1.2 million doses of Hib vaccines due to contamination with bacteria called *B. cereus*, a potentially lethal (<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3232990/>) food-poisoning bug.
- In 2009, more than 40,000 doses of a meningitis C vaccine for babies were withdrawn (<https://www.telegraph.co.uk/news/health/news/4809324/Baby-vaccine-withdrawn-over-contamination-fears.html>) from the British market when they were found to be contaminated with blood-poisoning bacteria, *S aureus*.
- In 2010, deep sequence analysis of eight different live attenuated virus vaccines revealed unexpected viral sequences in three of them: retrovirus avian leukosis was found in a measles vaccine, a virus similar to simian retrovirus was identified in Rotateq anti-diarrhea vaccine developed by CDC consultant Paul Offit, and the entire genome sequence of porcine circovirus1 was found in Rotarix leading the FDA to suspend the rotavirus vaccine (<https://www.fda.gov/NewsEvents/Newsroom/PressAnnouncements/ucm205625.htm>).
- In 2014, The US Food and Drug Administration ordered (<https://www.theguardian.com/business/2014/jun/24/glaxo-fda-flu-vaccines-review-manufacturing>) GlaxoSmithKline to review the manufacturing operation of its flu vaccine when it found microbiological contamination of products purporting to be sterile.
- In 2013, Merck & Company, Inc. recalled one batch of Gardasil when glass particles were discovered in several phials.
- Recently it was reported that **Why You Don't See Advertisers On GreenMedInfo** (<https://www.polygon.com/news/2016/12/15/1399999-recall-for-glass-found-in-vaccines-made-at-swiftwater>) its ActHIB vaccine for babies, even though it knew it was contaminated with glass shards. The FDA didn't object.

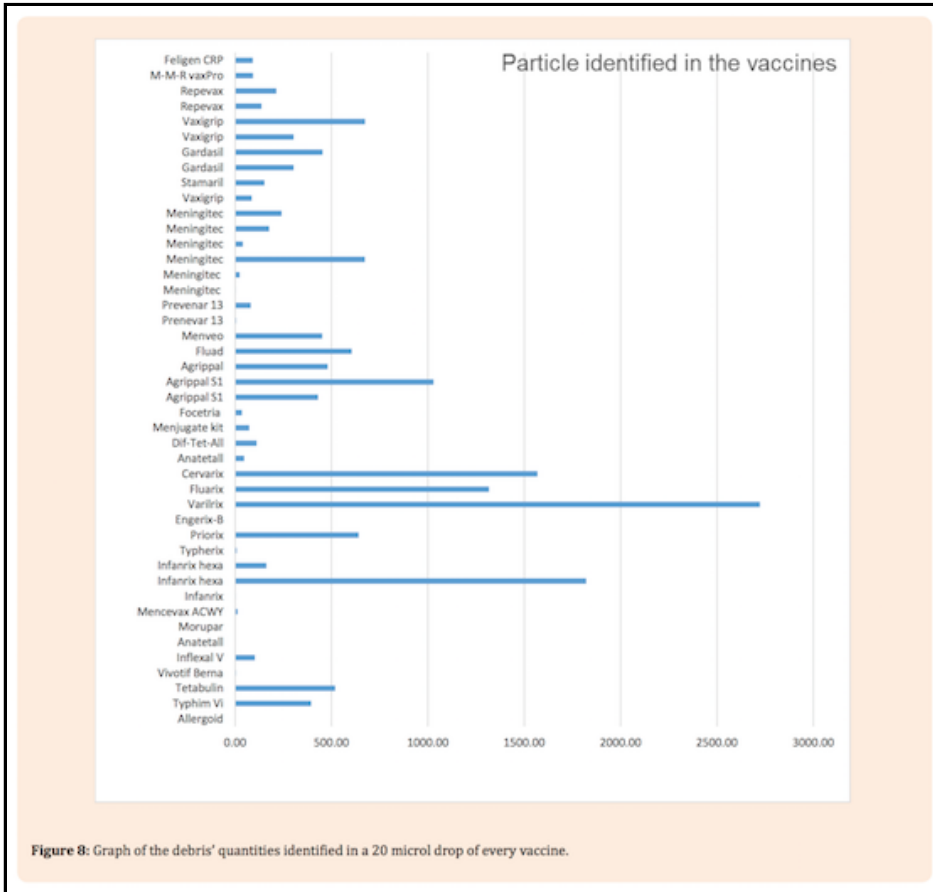

There are dozens of these cases, and even if vaccine manufacturers are issued multiple "warning" action is rarely ever taken to clean the vaccine manufacture process. **AD FREE** pharmaceutical companies have **AD FREE** memberships ([/membership](#)) and **AD FREE** donations ([/donation/donate-greenmedinfocom](#)) that we are able to serve 500,000 visitors a month with free access to our carefully curated research.

Clear and present danger

The study investigators conclude that the vaccine contamination they found is likely accidental. "Our hypothesis is that this contamination is unintentional, since **AD FREE** in order to continue, we need your support more than ever. Our memberships ([/membership](#)) start at only \$8.00 per month and provide you with enhanced content & features!

Discussion about why pharmaceutical companies don't produce clean vaccines is one thing. But the reality of vaccines as they are now is another. It doesn't change what is being injected into millions of people today. Dangerous unintended toxins are in every one of the vaccines tested in this investigation, except one for cats.

This research doesn't just show that vaccines are full of crud that top scientists can't even define. It makes a mockery of health oversight agencies like the FDA and CDC and their lies that vaccines undergo adequate safety checks and risk assessment.

It doesn't merely reveal that the long-term consequences of vaccinating cannot even be assessed. If anti-cancer vaccines like Gardasil and Cevarix contain cancer-causing aggregates of toxic metals, their use as a weapon against a cancer a girl has zero chance of getting before age 21 is not just useless. It is egregious abuse.

Now, every vaccine's claims to saving lives must be weighed against its risks of causing cancer, neurodevelopmental disease, autoimmune disease and every other immune-mediated "mystery" disorder now epidemic and soaring.

The results of these investigations not only negate every assertion that vaccines are "safe and effective", but they confirm that they are actually a clear and present danger.

View the new study in its entirety here (<https://medcraveonline.com/IJVV/IJVV-04-00072.pdf>).

For more research on the unintended, adverse effects of vaccination, use the GreenMedInfo.com Research Dashboard (/anti-therapeutic-action/vaccination-all) on the topic:
